## Introduction

This report summarizes a selection of data from the second administration of the Wabash Early Award Scholarship Program (EASP) student survey. The survey for the second round included two new blocks of questions designed to assess: (a) student awareness of the Early Award Scholarship Program and (b) student college planning activities. A summary of findings from these two new blocks is presented here.

The aim of this report is to aid in understanding current EASP program operations and student behaviors, and to identify opportunities for future development. Here we present basic frequency data (counts and percentages) for EASP leadership to review, but do not speculate on causal mechanisms, test hypotheses, or seek to generalize beyond this sample. Select data from matched parent surveys are utilized to provide background demographic information and to further illuminate student responses by subgroups of interest.

After describing the survey methodology, findings are presented in two chapters, each with its own set of key takeaways and conclusions. Chapter 1, program awareness, utilizes data from all surveyed grades. Findings are presented for the sample overall and broken down by parent educational expectations and parent communication. Chapter 2 , college planning, is limited to responses from only $10^{\text {th }}$ and $11^{\text {th }}$ grade students. Demographic and college planning findings are presented for the group overall and broken down by household income.

## Methods

## Sample

The population for this study is $7^{\text {th }}-11^{\text {th }}$ graders attending public school in Wabash County whose parents provided consent for participation. Out of a total of 1,905 parents surveyed, 567 parents completed the survey ( $567 / 1905=30 \%$ response rate). Of those that responded, 554 gave permission for their student to participate (student response rate 493/554=89\%). After merging parent and student surveys, there were 468 matched pairs for a final analytic sample $N=468$.

## Measures

## Descriptive Variables

Family descriptive variables were drawn from the matched parent survey and include parent's highest level of education (less than college, some college or associate degree, bachelor's degree or higher); household income (\$75,001 or more, \$75,000 or less); marital status (married, other); student gender (male, female), and student grade ( $7^{\text {th }}, 8^{\text {th }}, 9^{\text {th }}, 10^{\text {th }}, 11^{\text {th }}$ ).

## Subgroups of Interest

Findings are broken down by household income ( $\$ 75,001$ or more, $\$ 75,000$ or less), parent educational expectations (less than bachelor's, bachelor's or higher), and parent/other adult in household communication status about 529s or EASP (yes/no).

## EASP Awareness and Engagement

All program-specific items were designed in collaboration with the EASP staff. Items regarding awareness of EASP were asked of all students in each surveyed grade. These included items about discussing the program with household adults or other methods of awareness such as billboards or mailings.

EASP award-specific engagement items were asked only of those who self-reported they were enrolled in the program. These items covered more detailed engagement such as how students keep informed about their scholarships and other specific program incentives they have received.

## EASP Account Status

All parents and students were asked to report if they had an EASP account or fund. In addition, administrative data from EASP was used to ascertain actual program status.

## College Planning

All students in $10^{\text {th }}$ and $11^{\text {th }}$ grade were asked questions about college planning actions with the goal of understanding current level of participation in a variety of activities during high school designed to
promote college-going success. For instance, students were asked whether they have participated in counseling sessions for college planning or whether the student has or is planning to take the SAT/ACT.

In addition to the individual college planning activity items, two continuous variables were created by summing across items to allow easier inspection by select characteristics of students and families. In other words, it is easier to compare on a single score or a few collapsed categories as opposed to each of the numerous response options individually.

## Procedure

In early spring 2022, all parents of Wabash County public school students in grades 7-11 were invited to complete a survey as part of an evaluation of the Wabash Early Awards Scholarship Program. Whether or not a parent agreed to participate in the survey for themselves, they were also asked to provide consent for their child to complete a survey later in the semester.

Student survey administration took place at school in a group setting, such as in the auditorium during advisory period, between March and May 2022. Emails were sent to all parent-consented students notifying them of the time and place of the survey, along with a survey link. The emails were delivered the day before survey administration with a copy also sent to parents. At the time of survey administration, students were given a password allowing them to access the survey link. Hard copies were available for students who were having technical difficulties or otherwise requested a hard copy. Upon completion of the survey, each student received \$5 cash. Most student surveys (96\%) were completed online.

## Results

## Descriptives - Full Sample

Select demographic variables from the matched parent survey are used to describe the sample (Table 1). Completed surveys were more likely to be from younger students with nearly one-half ( $48 \%, n=223$ ) coming from $7^{\text {th }}$ and $8^{\text {th }}$ grade and the fewest respondents from $11^{\text {th }}$ grade $(13 \%, n=61)$. Respondents were equally split between male and female. Most parent respondents were married $(75 \%, n=339)$ with $52 \%(n=231)$ living in a household with an annual income over $\$ 75,000$. Most parents had at least some college education ( $79 \%, n=356$ ), and more than two-thirds $(67 \%, n=296)$ expect their child to earn a bachelor's degree or higher. Compared to Census Bureau data for Wabash County (U.S. Census, 2020), this sample was made up of more college-educated, married, and higher-income respondents than typical residents of Wabash County.

Table 1. Descriptive statistics $(\mathbf{N}=\mathbf{4 6 8})$

Table 1a. groups items related to parent and student program awareness. For the question asking students whether a parent or other adult in their household talked specifically about a "Promise 529" or a "CollegeChoice 529 " account or fund, $40 \%(n=187)$ of the respondents replied that an adult had talked specifically about the program, $24 \%(n=111)$ responded that an adult had not talked about the program. Two thirds $(36 \%, n=169)$ responded that they were not sure.

Fewer than one-half of student respondents $(39 \%, n=183)$ reported having a parent or adult in the household specifically talk with them about the Early Award Scholarship or Promise Scholarship in the last 12 months. Thirty percent $(n=138)$ answered that they have not heard about it while $31 \%(n=146)$ replied that they were not sure.

Whereas students were asked separately about 529 or EASP communication from parents, parents were asked about both programs in one question. Nearly one-half $(48 \%, n=218)$ of parent respondents reporting talking to their child about either Promise/CollegeChoice 529 or EASP in the last 12 months.

Thirty-six percent $(n=167)$ of the respondents answered that a parent or other adult in the household had shown them a statement for either their Promise/CollegeChoice529 account or Early Award Scholarship Program in the past 12 months. Thirty-five percent ( $n=161$ ) replied to have not seen any statement while $30 \%(n=137)$ replied not sure. In contrast, $46 \%(n=209)$ of parent respondents reported showing their students a 529 or EASP account statement.

From administrative data we know that $84 \%$ of the sample is enrolled in EASP. Sixty percent $(n=279)$ of the student respondents replied that they had an Early Award Scholarship account or fund, while 10\% ( $n$ $=48)$ said they did not have an account and $30 \%(n=138)$ replied that they were not sure. When crosschecked against administrative data, 69\% accurately reported their account status, 12 students (3\%) who are in EASP indicated they were not, but 109 students (28\%) indicated they were not sure if they had an Early Award Scholarship account or fund (also called a Promise Scholarship account or fund) when they actually did. Similarly, when parent self-report account status is compared against administrative data, we see the majority ( $87 \%$ ) with accounts are aware of the accounts while about $13 \%$ without accounts believe they have an account and another $13 \%$ with accounts do not believe they have an account.

Table 1a. Parent and student communication and awareness of enrollment status ( $\mathbf{N}=\mathbf{4 6 8}$ )

|  | n | $\%$ |
| :--- | :---: | :---: |
| Student reports parent talked to them about Promise/CollegeChoice 529 |  |  |

| Yes | 342 | $76 \%$ |
| No | 111 | $25 \%$ |
|  |  |  |
| Student report of EASP account status |  |  |
| Yes | 279 | $60 \%$ |
| No or not sure | 186 | $40 \%$ |

Given the prominence of parent educational expectations in the CSA field and education research broadly, data from Table 1 and Table 1a are also summarized based on level of parent educational expectations (e.g., Rauscher et al., 2017; Chen et al, 2020; Zheng, Starks et al., 2019) (Table 2).

Parents who expect their child to complete a bachelor's degree or higher tend to be parents of a female child, have a bachelor's degree or higher themselves, higher income and married. Student grade was not associated with parent educational expectations.

Table 2. Descriptive statistics by parent education expectations ( $\mathrm{N}=468$ )

|  | Less than <br> bachelor's |  | Bachelor's or <br> higher |  | Chi-square |

| Less than bachelor's |  |  |  |  |  |
| bachelor's or higher |  |  |  |  |  |

Among families with higher parent educational expectations students are more likely to report communicating about EASPs or seeing a statement, and the student is more likely to be aware of their
enrollment status. Administrative EASP enrollment status was not significantly different by parent educational expectations.

Table 2a. Program communication and awareness by parent educational expectations ( $\mathbf{N}=\mathbf{4 6 8}$ )

|  | Less than bachelor's |  | Bachelor's or higher |  | Chi-square |

| No | 83 | 50\% | 100 | 34\% |  |

Communication between parents and students about CSAs is an emerging area of research and is seen as an increasingly key mechanism to CSA program effectiveness (Zheng, Elliott, \& O'Brien, 2022). In Table 3, we see that parents who have communicated with their child in the past 12 months about Promise 529/CollegeChoice 529 or EASP are more likely to be married with higher income, expect their child to go to college (also found in Zheng, Elliott, \& O'Brien, 2022) and have higher education. Grade or gender of the student was not statistically significant.

Table 3. Descriptive statistics by parent reported 529/EASP communication status ( $\mathbf{N}=468$ )

|  | Communicated |  | Did not communicate |  | Chi-square |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | n | \% | n | \% |  |
| Grade |  |  |  |  |  |
| $7{ }^{\text {th }}$ | 64 | 29\% | 54 | 23\% | ns |
| $8^{\text {th }}$ | 52 | 24\% | 51 | 22\% |  |
| $9^{\text {th }}$ | 41 | 19\% | 46 | 19\% |  |
| 10th | 38 | 17\% | 50 | 21\% |  |
| 11th | 23 | 11\% | 36 | 15\% |  |
|  |  |  |  |  |  |
| Gender |  |  |  |  |  |
| Female | 116 | 53\% | 127 | 54\% | ns |
| Male | 102 | 47\% | 110 | 46\% |  |
|  |  |  |  |  |  |
| Parent marital status |  |  |  |  |  |
| Married | 172 | 80\% | 166 | 71\% | 4.942, p < . 05 |
| Other | 43 | 20\% | 68 | 29\% |  |
|  |  |  |  |  |  |
| Household income |  |  |  |  |  |
| \$75,000 or less | 82 | 39\% | 129 | 56\% | 12.437, p < . 001 |
| \$75,001 or more | 128 | 61\% | 102 | 44\% |  |
|  |  |  |  |  |  |
| Parent highest education |  |  |  |  |  |
| Less than bachelor's | 107 | 50\% | 152 | 65\% | 10.933, p < . 001 |
| bachelor's or higher | 109 | 51\% | 82 | 35\% |  |
|  |  |  |  |  |  |
| Parent educational expectations |  |  |  |  |  |
| Less than bachelor's | 60 | 28\% | 103 | 44\% | 12.798, p < . 001 |
| bachelor's or higher | 158 | 73\% | 133 | 56\% |  |

Furthermore, in Table 3a we see that parents who have communicated about Promise 529/CollegeChoice 529 or EASP are also more likely to have a student who reports receiving parent communication about EASP.

Table 3a. Program communication and awareness by parent communication ( $\mathrm{N}=468$ )

|  | Communicated |  | Did not communicate |  | Chi-square |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Program Awareness Sources

Table 4 displays the frequencies for the question asking all the sources from which the student has heard about the Early Award Scholarship Program. Students were instructed to select all that apply. Most students heard from their teacher $(60 \%, n=281)$ and $50 \%$ from family members ( $n=232$ ). A fair number of students replied they heard about it from an event (44\%, $n=204$ ) or poster at school ( $39 \%, n$ $=180$ ), $35 \%$ remembered something mailed to their home ( $n=163$ ), $38 \%$ replied that they heard about the program through a flyer sent home from school ( $n=176$ ). A smaller number of students replied they heard about the program from another student ( $23 \%, n=108$ ), $12 \%$ heard from a sibling $(n=58)$. The
least endorsed communication mechanism was a billboard on the road $(2 \%, n=8)$ or an advertisement at the drive-in $(2 \%, n=9) ; 17 \%(n=80)$ of the students replied to have never heard about the program until this survey.

Table 4. Student EASP sources of information, select all that apply ( $\mathbf{N}=468$ )

|  | $\mathbf{n}$ | \% |
| :--- | :---: | :---: |
| My teacher | 281 | $60 \%$ |
| Mom, Dad, or other family member | 232 | $50 \%$ |
| An event at school | 204 | $44 \%$ |
| Poster at school | 180 | $39 \%$ |
| Flyer sent home from school | 176 | $38 \%$ |
| Something mailed to my home | 163 | $25 \%$ |
| Another student | 108 | $23 \%$ |
| I never heard about it until this survey | 80 | $17 \%$ |
| Sibling (brother or sister) | 58 | $12 \%$ |
| Ad at the drive-in | 9 | $2 \%$ |
| Billboard on the road | 8 | $2 \%$ |

Note. Missing values are not included in the calculation of count.

EASP Students Only. The 279 students who answered yes to having an EASP fund or account were then asked a set of EASP award-specific communication questions summarized in Tables 5-9.

Table 5 displays the frequencies for the questions asking about sources of information and specific EASP program components. Thirty percent $(n=83)$ of students replied they did not remember getting something in the mail about Early Award Scholarships, while $42 \%(n=118)$ of students remembered receiving a savings postcard, $28 \%(n=77)$ remembered an invitation to be honored at a basketball game halftime and $43 \%(n=121)$ remembered receiving a Fund Statement showing how much money is in the fund. It should be noted that these values assume all respondents were eligible for these mailings.

Table 5. Student EASP sources of information received in the mail, select all that apply (EASP students only, n = 279)

| Do you remember ever getting something in the mail about EASP? | $\mathbf{n}$ | \% |
| :--- | :---: | :---: |
| No | 83 | $30 \%$ |
| Yes - a savings postcard | 118 | $42 \%$ |
| Yes - an invitation to be honored at a basketball game halftime | 77 | $28 \%$ |
| Yes - a Fund Statement showing how much money is in my Fund | 121 | $43 \%$ |

Note. *Missing values are not included in the calculation of count.

Table 6 addresses the question asking how the student knows they are earning Early Award Scholarships. The largest number of students replied that they received an object connected to the program (44\%, $n=134$ ), followed by their teacher tells them an assignment will bring them closer to earning a scholarship $(46 \%, n=129)$. Another large portion of students replied that their parent shows them a Fund Statement or tells them how much scholarship money is in the fund (45\%, $n=125$ ). Also, a fair number of students replied that their teacher gives them their Early Award Scholarship Progress Report $(39 \%, n=109)$ or received something in the mail about a scholarship award they have earned
( $30 \%, n=119$ ). A smaller number of students have replied that they were invited to an event because they earned scholarships ( $36 \%, n=101$ ) or learned that they are earning Scholarships through a medium not mentioned in the survey $(6 \%, n=17)$.

Table 6. Student EASP sources of information about awards, select all that apply (EASP students only, n = 279)

| How do you know you are earning Early Award Scholarships? | n | $\%$ |
| :--- | :---: | :---: |
| I receive an object connected to the program (ruler, candy bar, pencil, sports <br> bag, stress ball, popcorn, etc.) | 134 | $48 \%$ |
| My teacher tells me an assignment will bring me closer to earning a scholarship. | 129 | $46 \%$ |
| My parent shows me a Fund Statement or tells me how much scholarship <br> money is in my fund. | 125 | $45 \%$ |
| My teacher gives me my Early Award Scholarship Progress Report. | 109 | $39 \%$ |
| I get something in the mail about a scholarship award I have earned. | 101 | $36 \%$ |
| I was invited to an event because I earned scholarships. | 54 | $19 \%$ |
| Other | 17 | $6 \%$ |

Note. *Missing values are not included in the calculation of count.

Student were asked to rank their top three choices for who talks to them the most about earning Early Award Scholarships. Table 7 displays how respondents ranked different individuals. Looking at who was ranked first most often, students ranked their parent or guardian as the person they talk with most about Early Award Scholarships $(51 \%, n=121)$ while their teacher was also a frequent top-ranked response from students ( $37 \%, n=102$ ). School principal was a popular second rank (34\%) or third-rank choice (47\%). The rest of the answers; brother or sister, someone else in family, other students, another adult showed low response rates ranked as first.

Table 7. Student EASP source of information, rank of top three $(\mathbf{n}=\mathbf{2 7 9})$

| Who talks to you the most about earning Early Award Scholarships? | Rank |  |  |
| :--- | :---: | :---: | :---: |
| Source | 1 | 2 | 3 |
|  | n | n | n |
| My parent or guardian | 121 | 71 | 45 |
| My brother or sister | 3 | 10 | 17 |
| Someone else in my family | 6 | 15 | 10 |
| My teacher | 102 | 98 | 35 |
| My principal | 24 | 43 | 59 |
| Other students/friends | 3 | 11 | 55 |
| Another adult in my life such as a coach or a teacher at church | 7 | 10 | 33 |

Note. Missing values are not included in the calculation of count.

Table 8 displays the response rate of the question asking whether students have received a special award from the Early Award Scholarship Program and if so, what kind reward the student has received. Students could select multiple responses. Fourteen percent ( $n=38$ ) of students replied to have not received any special award. The largest number of students received a candy bar ( $44 \%, n=124$ ), a prize such as a pencil, ruler, bag, stress ball, lanyard ( $37 \%, n=102$ ) or a certificate ( $35 \%, n=98$ ). A smaller number of students responded that their picture was on a poster/social media ( $16 \%, n=45$ ), received an award but could not remember what it was for $(18 \%, n=51)$ and was recognized in front of a
basketball crowd $(23 \%, n=63)$. The smallest number of students did not specify their award and answered as "Other" $(4 \%, n=11)$. Again, activities in Table 8 may not have been available to all students so the proportion remembering them may be underestimated.

Table 8. Student EASP special award recipients, select all that apply ( $\mathbf{n}=\mathbf{2 7 9 )}$

| Have you ever received a special award from the Early Award Scholarship Program? | n | $\%$ |
| :--- | :---: | :---: |
| No | 38 | $14 \%$ |
| Yes, a certificate | 98 | $35 \%$ |
| Yes, my picture was on a poster/social media | 45 | $16 \%$ |
| Yes, but I don't remember what it was for | 51 | $18 \%$ |
| Yes, I got a candy bar | 124 | $44 \%$ |
| Yes, I got another prize such as a pencil, ruler, bag, stress ball, lanyard, etc. | 102 | $37 \%$ |
| Yes, I was recognized in front of a basketball crowd | 63 | $23 \%$ |
| Other | 11 | $4 \%$ |

Lastly, table 9 displays the responses for the question asking how often the students think about the Early Award Scholarship Program. Fifty-eight percent ( $n=161$ ) of the students responded that they think about the program a few times a year. Twenty-nine percent ( $n=76$ ) responded they think about the program once a month. Twelve percent $(n=32)$ replied to think about it once a week and less than two percent $(n=5)$ report thinking about EASP every day.

Table 9. How often student thinks about EASP ( $\mathrm{n}=279$ )

|  | n | $\%$ |
| :--- | :---: | :---: |
| Every day | 5 | $2 \%$ |
| Once a week | 32 | $12 \%$ |
| Once a month | 79 | $29 \%$ |
| A few times a year | 161 | $58 \%$ |

Note. * Missing values are not included in the calculation of count.

## Conclusion

Previous research from Early Award Scholarship Program parents and students indicate parent/student communication about EASP is positively associated with development of a student's college-bound identity (Zheng, Elliott, \& O'Brien, 2022). Awareness not just of having an account, but also specific program features, is an integral part of communication. The findings from this survey sample reveal solid levels of student-parent communication, a high degree of EASP awareness among students, and opportunities for growth. Moreover, we see that in addition to families, teachers and school activities play a central role in providing specific program information to students as evidenced by substantial endorsement by students.

Key takeaways are summarized below:

- Student reports of parent 529 or EASP communication (talking or showing statements) hover around $40 \%$. These increase to closer to $45 \%$ among high educational expectation families and
closer to $50 \%$ among families where a parent reports communicating with the student about 529 or EASP in the past 12 months. Nearly $60 \%$ of students in communicator families report that their parent showed them an account statement. These rates are notable and reflect a high degree of focused effort from EASP overall.
- Efforts to encourage parent-student communication about the program would be worthwhile, particularly among lower SES families where we see that parent communicators are more likely to be married, and higher education and income.
- Overall, parent reports of communicating with students about the 529 or EASP (either talking or showing account statement) are just under $50 \%$. Parent reports of sharing an account statement are notably higher ( $75 \%$ ) among communicator families and only increase somewhat among higher educational expectation families.
- Overall, sharing account statements was not a highly endorsed activity by either parents (53\%) or students (40\%) but savings postcards in the mail and Fund Statements are ranked as a memorable source of awards knowledge (45\%). This could reflect an opportunity to build on the account statement as a touchstone for communication.
- Overall self-report of enrollment is $76 \%$ among parents; $60 \%$ among students. These rates increase among families with higher educational expectations and families that report communicating with their student about 529 or EASP.
- Parents, teachers, and school activities are the most common resources of program information for students. Opportunities exist to increase exposure from school principals, coaches, or other non-school figures.
- Community-based advertising such as billboards were not highly endorsed by students and may represent a potential opportunity to jointly engage the community and students.

## CHAPTER TWO: COLLEGE PLANNING

## Methods

The same matched student-parent survey data from Chapter 1 is used here but limited to students in $10^{\text {th }}$ and $11^{\text {th }}$ grade. Refer to Methods section of Chapter 1 for additional details.

## Results

## Descriptives

Select demographic variables from the matched parent survey are used to describe the sample of $10^{\text {th }}$ and $11^{\text {th }}$ grade students who received college planning questions (Table 10). Younger students were slightly more likely to complete the survey with over one-half ( $60 \%$ ) coming from $10^{\text {th }}$ grade. Respondents were equally split between male and female. Most parent respondents were married (79\%) with one-half living in a household with an annual income over $\$ 75,000$. Just under one-half of parents had at least a bachelor's degree (46\%) and more than one-half (60\%) expect their child to earn a bachelor's degree or higher. The majority of students were enrolled in EASP (75\%), according to administrative records.

Table 10. Descriptive statistics $(\mathbf{N}=153)$

|  | n | $\%$ |
| :--- | :---: | :---: |
| Grade |  |  |
| 10 th | 92 | $60 \%$ |
| 11 th | 61 | $40 \%$ |

| bachelor's or higher | 90 | $60 \%$ |

## College Planning

Tables 11 and 13 display results of two sets college planning items asked of all $10^{\text {th }}$ and $11^{\text {th }}$ grade students ( $n=153$ ). Table 11 includes 8 questions about participating in college/career planning sessions or events since the beginning of the school year. Most students $(90 \%, n=135)$ have met a counselor at school to discuss about the classes they need to graduate from high school. A fair number of students replied they have talked to their counselor or someone else at school about the classes to get into college ( $63 \%, n=95$ ), attended a class or meeting about possible careers ( $60.2 \%, n=68$ ), and have visited a job site or talked with someone about their job $(59 \%, n=88)$. However, there was a low number of students who attended any one-on-one advising sessions about getting ready for college ( $27 \%, n=40$ ), attended a class or meeting about getting ready for college ( $36 \% n=54$ ), talked with their school counselor or anyone about the PSAT/Plan or ACT Plan ( $46 \%, n=42$ ) or attended a class or meeting preparing for the PSAT/Plan or ACT Plan ( $41 \%, n=61$ ).

Table 11. College planning, current school year ( $\mathrm{N}=153$ )

|  | Yes |  | No |  |
| :--- | :---: | :---: | :---: | :---: |
|  | $\mathbf{n}$ | $\%$ | $\mathbf{n}$ | $\%$ |
| Have you talked with your school counselor or someone else at <br> your school about the classes you need to graduate from high <br> school? | 135 | $90 \%$ | 15 | $10 \%$ |
| Have you talked with your school counselor or someone else at <br> your school about the classes you need to get into college? | 95 | $63 \%$ | 55 | $37 \%$ |
| Since the beginning of the school year, have you attended a class or <br> meeting about possible careers after you finish school? | 88 | $59 \%$ | 61 | $41 \%$ |
| Since the beginning of the school year, have you visited a job site or <br> talked with someone about their job? | 85 | $57 \%$ | 64 | $43 \%$ |
| Since the beginning of the school year, have you talked with your <br> school counselor or someone else at your school about the <br> PSAT/Plan or ACT Plan?* | 42 | $46 \%$ | 49 | $54 \%$ |
| Since the beginning of the school year, have you attended a class or <br> meeting about preparing for the PSAT/PLAN or ACT Plan? | 61 | $41 \%$ | 87 | $59 \%$ |
| Since the beginning of the school year, have you attended a class or <br> meeting about getting ready for college? | 54 | $36 \%$ | 96 | $64 \%$ |
| Since the beginning of the school year, have you attended a one- <br> on-one counseling or advising session about getting ready for <br> college? | 40 | $27 \%$ | 110 | $73 \%$ |

Note. Missing values are not included in the calculation of count and percentages. *41\% missing

Table 12 displays the frequencies for the single question asking whether the student is planning to take the SAT or ACT. The response options for this question are: "You haven't thought about it", " No, you don't plan to take it", "Yes, you've already taken it", and "Yes, you plan to take it". Out of 148 replies, one-half replied that they plan to take the exam $(n=74)$ and $33 \%(n=49)$ replied they have already
taken it. In contrast, $13 \%$ replied they have not thought about it $(n=19)$ while only $4 \%(n=6)$ students replied that they were not planning to take it.

Table 12. Have taken or are planning to take the SAT or ACT ( $\mathrm{N}=153$ )

|  | $\mathbf{n}$ | \% |
| :--- | :---: | :---: |
| You haven't thought about it | 19 | $13 \%$ |
| No, you don't plan to take it | 6 | $4 \%$ |
| Yes, you've already taken it | 49 | $33 \%$ |
| Yes, you plan to take it | 74 | $50 \%$ |

Note. Missing values are not included in the calculation of count.

Responses from all but one item in Table 11 and a dichotomized version of the single item in Table 12 were summed to create a single overall score with a minimum possible value of zero and maximum value of 8 . On average, students had participated in 5 of the 8 activities ( $\min 0$, max 8 ) with $30 \%(n=44)$ completing 3 or fewer; $43 \%(n=63)$ completing 4 or 5 ; and $28 \%(n=41)$ completing six or more. The item asking whether a student had talked with school counselor or someone else at your school about the PSAT/Plan (College Board's Preliminary Scholastic Assessment Test or ACT's Plan) was not include in the overall score due to a very high degree of missingness ( $n=62,41 \%$ ). The reason for missing data on this one item is unclear. No statistically significant relationships were found when examining the continuous version of this variable or the three-level categorical version (3 or fewer; 4 or 5; 6 or more) in relation to parent educational expectations, household income, parent report of communication about 529 or EASP or student report of parent communication about EASP.

However, looking at the item from Table 12 in isolation, we find that students who report they have taken or are planning to take the ACT/SAT are more likely to have parents with higher educational expectations and higher incomes as well as parents that report having talked to their student about 529 or EASP.

Table 13 displays the frequencies of a series of questions asking students whether they have engaged in specific college preparation activities since starting high school. Most students have researched career possibilities ( $89 \%, n=133$ ), $86 \%$ of students $(n=126$ ) report they have taken the PSAT/NMSQT (the preSAT) while $65 \%(n=97)$ students have replied to have taken practice ACT/SAT exams. Just over one-third ( $36 \%, n=54$ ) of students have taken the SAT/ACT (which aligns with the $33 \%$ reporting on a similar question in Table 11). A fair number of students have engaged in direct college related activities as 55\% of $(n=82)$ students have attended college fairs, $61 \%(n=91)$ have spoken with college representatives, $46 \%(n=68)$ have visited in-state college campuses and $69 \%$ of $(n=103)$ students have obtained information from college web sites. Only 7\% $(n=11)$ of the students have visited out-of-state college campuses. About one-quarter ( $28 \%, n=42$ ) of the students have sat in on a college-level course; $27 \%$ ( $n$ $=40$ ) have used college guidebooks.

Table 13. College/Career Preparation Related Activities, ( $\mathrm{N}=153$ )

|  | No |  | Yes |  |
| :--- | :---: | :---: | :---: | :---: |
| Since you started high school, have you: | n | $\%$ | n | $\%$ |
| Researched career possibilities | 17 | $11 \%$ | 133 | $89 \%$ |
| Taken the PSAT/NMSQT (the pre-SAT) | 21 | $14 \%$ | 126 | $86 \%$ |
| Obtained information from college web sites | 46 | $31 \%$ | 103 | $69 \%$ |
| Taken practice ACT/SAT exams | 53 | $35 \%$ | 97 | $65 \%$ |
| Spoken with college representatives | 58 | $39 \%$ | 91 | $61 \%$ |
| Attended College Fairs | 67 | $45 \%$ | 82 | $55 \%$ |
| Visited in-state college campuses | 81 | $54 \%$ | 68 | $46 \%$ |
| Taken the SAT/ACT | 96 | $64 \%$ | 54 | $36 \%$ |
| Sat in on a college-level course | 106 | $72 \%$ | 42 | $28 \%$ |
| Used college guidebooks (on-line or print) | 109 | $73 \%$ | 40 | $27 \%$ |
| Visited out-of-state college campuses | 138 | $93 \%$ | 11 | $7 \%$ |

Note. *Missing values are not included in the calculation of count.
These items in Table 13 were summed to create a single score with a minimum possible value of 0 and a maximum value of 11 . On average students reported completing 6 of the college preparation activities ( $\min 0, \max 10$ ) with one-fifth $(20 \%, n=29)$ completing 0 to 3 activities; $28 \%(n=40) 4-5$ activities; $30 \%$ ( $n=44$ ) 6-7 activities; and $22 \%(n=32) 8$ or more activities. No statistically significant relationships were found between this overall variable and parent educational expectations, household income, or parent report of communication about 529 or EASP or student report of parent communication about EASP.

Overall, the most common college preparation activities appear to be having talked with a school counselor or someone from school about classes needed to graduate ( $90 \%$ ) followed by have or planning to take ACT/SAT (83\%) or PSAT (86\%). However, many students also report activities reflecting interest in college such talking with a college representative ( $61 \%$ ) and visiting college websites (69\%). Least common is one-on-one counseling or advising session about getting ready for college although even then $27 \%$ reported having had engaged in this activity.

## Conclusion

Many college-preparation activities are offered as part of the regular school-year activities. For example, the Indiana Department of Education (IDOE) covers the costs associated with administration of the PSAT/NMSQT (Preliminary SAT/National Merit Scholarship Qualifying Test) for $11^{\text {th }}$ graders. Therefore, it is not surprising to see that $86 \%$ of student respondents in Wabash report they have taken these preliminary exams.

The IDOE $(2023)$ and the College Board $(2020,2021,2022)$ report that the percentage of high school graduates in Indiana taking the SAT has increased from $43 \%$ in 2021 to $48 \%$ in 2022, and then to $50.5 \%$ in 2023. While the current survey data shows that only about $36 \%$ have taken the exam already, we
know that another 50\% are planning on taking it. Given this, while more research is needed, there is a good chance that the percent taking the SAT/ACT will be higher among participants in the program. Currently, among $10^{\text {th }}$ and $11^{\text {th }}$ grade respondents that are in EASP, $54 \%$ express plans to take the SAT/ACT compared to $39 \%$ of those that are not enrolled in EASP. Looking at it another way, $81 \%$ of those who say they plan to take it are enrolled in EASP compared to $20 \%$ planning to take it among nonEASP $10^{\text {th }}$ and $11^{\text {th }}$ graders. However, it is important to note the very small sample size of non-enrolled students in this group ( $n=14$ ) and that it is unclear how the timing of this survey administration coincided with the time of the exams, both factors that reduce our precision in determining the relationship between EASP enrollment and SAT/ACT test taking.

It is also notable that $90 \%$ of students reported talking to a school counselor about classes needed for graduation and $63 \%$ talked about classes needed for going to college. These relatively high percentages of students talking to a counselor are notable in light of the very high student-to-counselor ratio in Indiana, suggesting it may be harder for students to meet with a counselor (Smith, 2023). In the 20212022 academic year, Indiana schools noted a student-to-counselor ratio of 694 to 1, a figure markedly higher than the national average of 408 students per counselor, according to the American School Counselor Association (ASCA, 2023). This ratio far exceeds the ASCA's recommended standard of 250 students per counselor. The data reveal a rapid increase in Indiana's student-to-counselor ratio, rising from 486 students per counselor in the 2019-2020 academic year to 665 in 2020-2021, and then to 694 in 2021-2022. This significant rise positions Indiana as the state with the highest student-to-counselor ratio in the nation between 2021 and 2022.

A greater understanding of how these college planning activities are approached in Wabash County schools will be needed for accurate interpretation of the data. For the purposes of EASP programmatic planning, because these activities occur after students graduate from EASP, they offer less opportunity for direct influence through savings incentives. Although current data do not show a relationship between EASP parent-student communication and college-planning activities, there could be opportunities to promote these later college planning activities while couched in early EASP parentstudent communication-based rewards.
